AUTHOR INDEX FOR VOLUME 87 498

NOTICE

The Subject Index for Volume 87 will appear in the December 1990 issue as part of a cumulative index for the year 1990.

INFORMATION FOR AUTHORS

ICARUS is devoted to the publication of original contributions in the field of solar system studies. Manuscripts reporting the results of new research—observational, experimental, or theoretical—concerning the astronomy, geology, meteorology, physics, chemistry, biology, and other scientific aspects of our solar system or extrasolar systems are welcome. The journal generally does not publish papers devoted **exclusively** to the Sun, the Earth, celestial mechanics, meteoritics, or astrophysics. The language of publication is English. In special cases, with the Editor's approval, short abstracts of papers can also appear in French, German, or Russian. All papers are reviewed, generally by two independent referees. Authors will usually be asked to respond to criticisms and suggestions by the referees prior to publication; at the Editor's discretion, reviewers may be consulted about resubmitted manuscripts. Authors are invited to submit a list of no more than five potential reviewers; the Editor may use this to guide his selection of referees. If authors so request in their cover letters, manuscripts will be handled anonymously during the refereeing process.

Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. For the benefit of the reviewers, three (3) copies of all crucial references cited in the manuscript as *submitted* or *in press* must accompany the paper. Articles and any other material published in ICARUS represent the opinions of the authors and should not be construed to reflect the opinions of the Editor or the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

There are no page charges. However, authors will be charged for color reproduction or foldout pages; the publisher will provide an estimate of these costs on request. Fifty **reprints** of each paper will be furnished gratis to the author and additional reprints may be purchased.

Manuscripts. *Four copies* of the manuscript, including figures, tables, etc., should be submitted to *Editorial Office, Icarus, Space Sciences Building, Cornell University, Ithaca, New York 14853-6801. Telephone: 607-255-4875; fax: 607-255-9002; electronic mail:* CUSPIF::ICARUS *on* SPAN *or* icarus@astrosun.tn.cornell.edu *on* internet. Authors should retain the original typescript. At least one set of figures should be suitable for camera-ready reproduction. All manuscripts must be typewritten with wide margins and *double-spaced throughout,* including references and footnotes. Number each page of the manuscript. Include on the first page the title of the paper and the name(s) and affiliation(s) of the author(s), including mailing address(es) and telephone number(s) [or telex number(s) or electronic mail address(es)]. At the bottom of the first page note the number of manuscript pages, figures, and tables. On the second page indicate a proposed running head of not more than 35 characters, and the name and address to which editorial correspondence and proofs should be directed. The third page should contain a brief abstract, and the text should begin on the following page. After the main text, give Appendixes, Acknowledgments, references, tables, figure captions, and figures, in that order. Places where figures and tables are to appear in the published paper should be marked in the margins of the manuscript.

Please write with attention to organization, style, and especially brevity. Present results logically, with order dictated by the needs of the reader. Take special care in composing the title and abstract, since these will be the most frequently read sections of the paper. In the title, specific words are preferable to general ones. The abstract should summarize the conclusions of the research, including quantitative results where appropriate, rather than merely stating the problem.

Whenever possible, quotients in mathematical expressions should employ the solidus (/) rather than being displayed in built-up form. However, for units, exponential notation is preferred (e.g., erg cm^{-2} sec^{-1}, not erg/cm^2 sec). Most authors will recall the difference between "i.e." and "e.g.," will note that such nouns as "data" are plural and "mare" singular, and will take care to insert a zero before decimal fractions lying between +1 and −1.

Guidelines for Submission of "Notes": Papers on especially topical subjects will be given unusually rapid handling if they satisfy the following limitations on length:

(i) Manuscripts should be typed double-spaced and should be no longer than nine pages, including a very brief abstract of one or two sentences.

(ii) The sum of figures and tables should be less than, or equal to, two.

We expect that ICARUS will publish "Notes" within four months of submission, if no revision is required. We will try to complete refereeing and editorial handling in less than one month. In order to speed publication, proofs of "Notes" will be proofread only at Academic Press.

Tables and Figures. When described in the body of the text, a table should be referred to as Table X, and a figure as Fig. Y (use the abbreviation everywhere except at the beginning of a sentence).

Tables are to be numbered consecutively with Roman numerals in order of their citation in the text. Each table should be typed, *double-spaced,* on a separate sheet with due regard to the proportions of the printed page. All tables should bear appropriate headings. Unusually elaborate tables should be prepared to allow them to be reproduced in the journal directly without typesetting.

Figures. At the time of submission of the manuscript, one original of each figure is to be submitted in such form as to permit photographic reproduction without redrawing: Line glossies should be carefully drafted, no larger than 22 × 30 cm. Original drawings, laser prints, or standard glossy photographic reproductions are acceptable. *Authors should design figures so that they will fit one or two columns of print. Care should be taken to assure that computer-drawn figures use the journal's space efficiently.* Lettering on drawings should be of professional quality or generated by *high-resolution* computer graphics and should be large enough (10–12 points) to take a reduction of 50–60%. Drawings should be made with black India ink on tracing linen, smooth-surface white paper, or Bristol board. Alternatively, *high-quality* computer graphics may be acceptable. Graph paper, if used, should be ruled in blue. *Each figure should be identified with the author's name and figure number.* All figures, whether line drawings or halftones, should be numbered consecutively in Arabic numerals, in order of their citation in the text. Figure captions should be typewritten on a separate sheet, following the text. Color plates and foldouts are published at the author's expense.

Literature citations in the text should be in one of the following forms: Goody and Yung 1989 (for two authors); Farinella *et al.* 1990 (for three or more authors); Allison 1990, p. 198 (for reference to a specific page). To distinguish two or more works by the same author(s) in the same year, use suffixes a, b, etc., following the year (e.g., Ojakangas and Stevenson 1989a, 1989b).

Literature citations in the bibliography should be *listed alphabetically* according to the surname of the (first) author. Journal references should contain the *names and initials of all authors, the year, the title of the article, and standard abbreviation of the journal, the volume number, and the first and last page numbers.* Titles of journals and books should be in italics, volume numbers in boldface. (In a typed manuscript, indicate italics by single underlining and boldface by wavy underlining.) Below are shown examples of the proper reference forms for a book chapter, a journal article, and a book, respectively.

CHAMBERLAIN, J. C., AND D. M. HUNTEN 1987. *Theory of Planetary Atmospheres, An Introduction to Their Physics and Chemistry,* 2nd ed. Academic Press, San Diego.

SCHOLL, H., CH. FROESCHLÉ, H. KINOSHITA, M. YOSHIKAWA, AND J. G. WILLIAMS 1989. Secular resonances. In *Asteroids II* (R. P. Binzel, T. Gehrels, and M. S. Matthews, Eds.), pp. 845–861. Univ. of Arizona Press, Tucson.

SPENCER, J. R. 1990. A rough-surface thermophysical model for airless planets. *Icarus* **83,** 27–38.

Careful compliance with these instructions for the preparation of the list of references is required; manuscripts with incomplete references (or missing abstracts) may be returned to the author for correction before being considered for publication.

Proofs will be sent to authors. When submitting a manuscript, the author should include a list of the symbols employed, identified typographically, not mathematically. This list will not be printed, but will help to avoid costly author's corrections in proof. Authors will be charged for excessive alterations in proof.

Personal computer disks

Manuscripts may be submitted to *Icarus* on personal computer disks. Please supply the file as a straight ASCII file with generic codes specified by the publisher. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular and mathematical material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing the disk for typesetting conversion and a list of generic codes, please contact the publisher (Editorial Manager, Journal Division, Academic Press, 1250 Sixth Avenue, San Diego, California 92101; Telephone: 619 699-6415; Fax: 619 699-6800).

Keep Up-to-Date in This Exploding Field

Fluid Mechanics

Pijush K. Kundu

Key Features:

- Gives equal treatment to topics in both engineering and geophysical fluid dynamics—for physicists, it covers geophysical fluid mechanics and gravity waves; for engineers, it looks at aerodynamics and compressible flow
- Other topics include governing equations, boundary layers, instability, turbulence, deterministic chaos, and double-diffusive instability
- Suitable as an advanced first-course textbook for students in engineering, geophysics, and atmospheric sciences
- Contains fully worked examples in each chapter as well as end-of-chapter problems

August 1990, 638 pp., $55.00
ISBN: 0-12-428770-0
Instructor's manual available:
August 1990, 83 pp., $9.50/ISBN: 0-12-428771-9

Fluid Mechanics of the Atmosphere

Robert A. Brown

This book presents the fundamental equations which govern most of the flow problems studied by atmospheric scientists. The goal of this text is twofold—first, to furnish the student with a background familiarity with the underlying physics behind the mathematics; second, to explore some systematic methods of relating these physics to atmospheric problems.

December 1990, c. 398 pp., $69.50 (tentative)
ISBN: 0-12-137040-2

Dynamics of Fluids in Hierarchical Porous Media

edited by
John H. Cushman

This text ties together the most recent and powerful theoretical, computational, and experimental methods for studying hierarchical porous media.

July 1990, 528 pp., $91.00/ISBN: 0-12-200260-1

Computational Fluid Mechanics

Selected Papers

Alexandre Joel Chorin

This volume, containing 14 papers on computational fluid dynamics, focuses on the numerical solution of the equations of fluid mechanics in circumstances where the viscosity is small; the big problem that is looming beyond the specific applications is the problem of turbulence.

1990, 242 pp., $35.00/ISBN: 0-12-174070-6

Plasma Waves

D.G. Swanson

A wide range of topics in plasma waves—from cold plasma, fluid plasma, and hot plasma waves through relativistic plasmas—is presented in this book.

1989, 440 pp., $45.00/ISBN: 0-12-678955-X

Benefit from the Experience of Leading Experts...

Storm and Cloud Dynamics

William R. Cotton and Richard A. Anthes

Volume 44 in the INTERNATIONAL GEOPHYSICS Series

This book uses both theoretical/numerical models and observation analyses to derive the dynamics and structure of clouds and precipitating systems. State-of-the-art computer modeling investigations are presented as are observational studies using such remote sensing platforms as satellites, conventional and Doppler radar, instrumented aircraft, and ground-based mesonet stations in which data are telemetered via satellite to a central receiving and data processing site.

October 1989, 883 pages, $149.95
ISBN: 0-12-192530-7

El Niño, La Niña, and the Southern Oscillation

S. George Philander

Volume 46 in the INTERNATIONAL GEOPHYSICS Series

El Niño and the Southern Oscillation is by far the most striking phenomenon caused by the interplay of ocean and atmosphere. It can be explained neither in strictly oceanographic nor strictly meteorological terms. This volume provides a brief history of the subject, summarizes the oceanographic and meteorological observations and theories, and discusses the recent advances in computer modeling studies of the phenomenon.

November 1989, c. 293 pages, $59.50
ISBN: 0-12-553235-0

Geophysical Data Analysis

Discrete Inverse Theory
Revised Edition

William Menke

Volume 45 in the INTERNATIONAL GEOPHYSICS Series

From the Reviews of the First Edition:

"I think that the value of the book is outstanding....It deserves a prominent place on the shelf of every scientist or engineer who has data to interpret."

—GEOPHYSICS

August 1989, 289 pages, $44.95
ISBN: 0-12-490921-3

Chemical Oceanography

Second Edition
Volume 10
SEAREX: The Sea/Air Exchange Program

edited by
J.P. Riley, R. Chester, and R. Duce

The Sea Air Exchange (SEAREX) Program was designed to study the atmospheric transport of both natural and anthropogenic substances to the Pacific Ocean, and to investigate the processes involved in their exchange across the air/sea interface. Carried out on an ocean-wide scale, the program mainly used island stations as collection platforms. This book summarizes the research results of this 10-year program. It provides detailed information on the sources, atmospheric concentrations, transport paths and fluxes to the North and South Pacific Ocean of a large number of trace elements and other inorganic species, organic compounds, and mineral aerosols.

November 1989, 424 pages, $95.00
ISBN: 0-12-588610-1

Atlas of Clouds Over the Qinghai-Xizang Plateau

The Institute of Meteorological Science of Qinghai Province

edited by
Xu Yigang

This regional cloud atlas provides comprehensive coverage of the state of clouds over the Qinghai-Xizang Plateau and describes the weather and climate features of the Plateau. Divided into two parts, this atlas begins with a survey of clouds over the Plateau, including a brief introduction to the formation, shapes, structures, and features of the clouds. More than 270 full-color photographs make up the second part of this atlas, which depicts the typical and special morphology of clouds, orographic clouds, systematic cloud systems, and the evolution of clouds over the Plateau.

This atlas is a joint publication of Science Press of Beijing, China and Academic Press. It is a dual language edition.

1986, 212 pages, $60.00
ISBN: 0-12-767665-1

The Earth's Ionosphere

Plasma Physics and Electrodynamics

Michael C. Kelley

A Volume in the INTERNATIONAL GEOPHYSICS Series

Until recently, space physics primarily has been an observational discipline. However, in recent years with plasma physics establishing itself with a theoretical basis, space physics has become more quantitative and fundamentally solid. This timely, up-to-date book will help students and researchers make the transition from pure physics to space or geophysics, and from an observational or aeronomic viewpoint to plasma physics.
